

GROSS DOMESTIC PRODUCT

2017 QUARTER 3

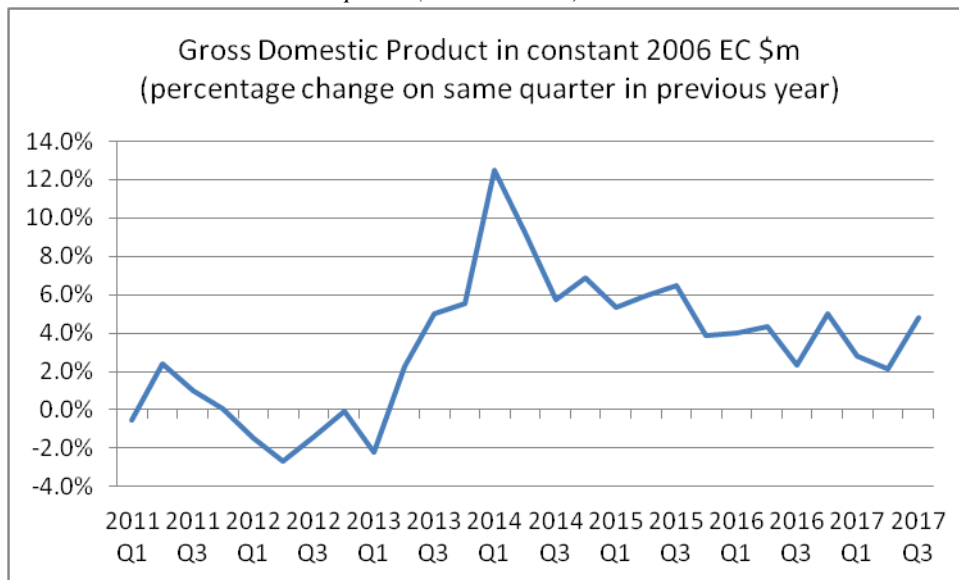

Note: This is the first time that quarterly estimates of Gross Domestic Product (GDP) have been published in Grenada. This series has been developed by the Central Statistics Office (CSO) to provide more timely estimates of the broad trends in economic activity. The series is entirely consistent with the annual estimates of GDP, which still provide the most comprehensive and detailed assessment of economic activity. The quarterly series is undergoing development and for the time being should be considered experimental. The CSO would welcome feedback on the utility of this new series.

Summary

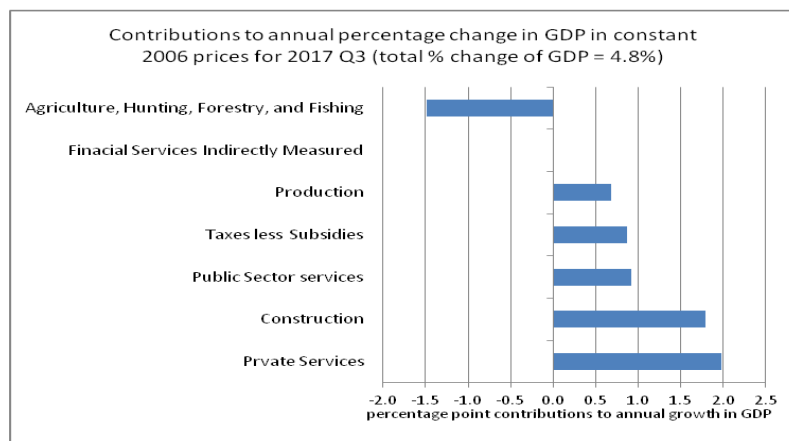

In the third quarter (Q3) of the 2017, Gross Domestic Product in constant 2006 prices in Grenada increased by 4.8 percent compared with the same quarter in the previous year. This compares with an increase of 2.2 percent in Q2 2017 compared with Q2 2016.

Chart 1: GDP in constant 2006 prices (EC \$ millions)

The increase of 4.8 percent this quarter was mainly the result of a 3.6 percent increase in Private sector services output (accounting for 2.0 percentage points), and from the Construction sector which grew by 32.4 percent (accounting for a further 1.8 percentage points of the total growth). See Chart 2.

Chart 2: Contributions to the annual percentage change in GDP (percentage points)

The increase in GDP was off-set to some extent by a fall in Agricultural activity of -22.5 per cent, which contributed -1.5 percentage points to the annual growth rate of 4.8 per cent.

Tables

Notes

The series presented in this statistical release have been developed based on a range of short term (monthly and quarterly) indicators of economic activity. These sources are in some cases still under development. The series should therefore be considered as 'experimental', and will be further developed in the coming period to improve their quality and consistency with the annual estimates.
